Bridge Go-to-Market Plan

Pilot launch plan | Version 1.0 | 2 November 2026

Purpose

Bridge needs active task owners and relevant student applicants at the same time. This plan proposes a focused pilot to validate one segment and the full task-to-application loop before broad promotion. No launch market, budget, customer list, or acquisition target was supplied; fill these before committing spend.

Launch thesis

Start with one reachable community and a narrow set of skills/tasks. Recruit task owners first or in parallel with a small student cohort so students see real opportunities when they arrive. Provide hands-on onboarding during the pilot. Treat every channel and message as an experiment with a named owner and measurable result.

Choose the pilot wedge

Score candidate segments against: access to both sides; recurring task need; project scope that students can complete; ease of verifying task clarity; reasonable task budgets; and ability to observe outcomes. Potential wedges (examples to evaluate, not recommendations based on research) include a university community, a professional association, or one local small-business category.

Audience and message

Audience	Draft message	Proof required before using as a claim
Students	Show your skills and portfolio, find relevant project tasks, and apply in one place.	Working profile/discovery/application flow and real task supply.
Task owners	Describe a project and review student applicants with skills and portfolio context.	Working task posting and applicant-review flow.
Campus/community partners	Give members a structured way to discover project opportunities.	Defined pilot support, participant experience, and data handling.

Avoid claims about verified talent, guaranteed hires, payment protection, or outcomes until substantiated.

Channel experiments

Experiment	Audience/channel	Small test	Measure
Owner interviews and direct outreach	One selected segment	Ask about a recent task, current sourcing, willingness to post, and budget clarity.	Interview-to-task-post intent; recurring need themes.
Student cohort recruitment	Partner/community invitations	Invite a limited cohort to complete profiles and review seeded tasks.	Invited-to-profile-complete; qualified applications.
Partner distribution	One campus or community partner	Offer a guided pilot with clear expectations and a feedback session.	Referred activation on both sides; partner effort.
Referral prompt	Activated pilot participants	Ask satisfied participants to refer one relevant person after a milestone.	Referral rate and referred activation.
Content showcase	Public examples with participant permission	Publish anonymized task examples and workflow explanation.	Qualified inbound interest, not raw impressions alone.

Pilot sequence

Preparation

- Select one wedge, define qualification rules, prepare a short product demo, and recruit initial task owners.
- Seed enough real, scoped tasks to make student recruitment credible. Do not fabricate listings.
- Prepare onboarding materials, support contact, reporting path, and a weekly review cadence.
- Instrument the key funnel events in the Analytics and KPI Plan.

Closed pilot

- Invite a limited cohort from the chosen segment.
- Guide both sides through profile, task, application, decision, and communication flows.
- Review task clarity and participant feedback manually.
- Contact users who stall at key steps to learn why; record themes without collecting unnecessary personal data.

Review and expansion

- Summarize funnel completion, task quality, qualified applications, owner response, accepted matches, repeated intent, and support effort.
- Fix the largest friction points before adding channels.
- Expand to a second segment only when the first can supply repeat opportunities and the team can support it.

Funnel and measures

Track for task owners: reached to interested to activated to first task published to first qualified applicant to decision to repeat task intent. Track for students: invited/reached to profile started to profile complete to task viewed to application submitted to decision received to repeat use intent. Define event names and denominator rules before comparing cohorts.

Launch assets

- One-page Bridge overview tailored to each audience.
- Short guided demo showing only implemented flows.
- Student profile completion guide and task-posting checklist.
- Pilot invitation and onboarding messages.
- Feedback form or interview guide.
- FAQ for product behavior and current limitations.
- Weekly pilot dashboard using agreed metrics.

Owners and cadence

Assign one accountable owner for each: task supply, student cohort, partner relationship, product issues, support, and weekly metrics. Hold a weekly pilot review to decide: continue, change onboarding, change segment, fix product friction, or pause recruitment.

Go/no-go questions

- Can the team reliably find and onboard task owners in this segment?
- Do tasks have clear scope, budget, skills, and deadlines?
- Do students complete profiles and submit relevant applications?
- Do owners make decisions and return for another task?
- Are support and safety issues manageable with the current team?
- Is there credible willingness to pay, and what operating burden would monetization create?

Open inputs: launch location/community, target cohort size, outreach list, channel budget, accountable owners, and numeric pilot thresholds. These should be selected by the business owner rather than invented here.
